

The owners of this newly renovated home wanted to replace their drab concrete driveway with a surface that would complement the southern European style of the house.

BEFORE & AFTER

Working together we were able to incorporate the design features of the house with a corresponding color and pattern. We chose a Calstone cobble-style paver in red/tan/charcoal tones. As the owners wanted to avoid vertical lines, we decided to lay the pavers in a random pattern. The results are magnificent. See pictures of how it all came together on our Web site.

think beyond asphalt and concrete
think pavers - the possibilities are endless

CHOOSE YOURS

If you have been thinking about giving your grounds a facelift, why wait? Replacing dated, cracked concrete or asphalt with a custom designed, professionally installed paved surface will give your home a whole new look. From streamline modern, to classic and traditional, the choices are tremendous, and not as expensive as you might think.

Features and benefits of interlocking paving stone installations far outweigh any other surface, and include:

- ▶ Increased value of your real estate
- ▶ Resistance to root growth, erosion, earthquake and frost
- ▶ A quick trouble-free installation which far outlasts any other form of paved surface
- ▶ Ready for use and able to bear heavy loads immediately after the installation
- ▶ The wide selection of stones, colors and styles provide an infinite variety of designs
- ▶ Broken or stained pavers are easily removed and replaced
- ▶ Easy access to roots, and underground pipes and cables for subterranean repairs
- ▶ Affordable luxury, excellent return on investment

an environmentally
conscious choice

In contrast to non-permeable materials such as asphalt and concrete, interlocking paving stones allow natural biological processes to filter run-off before it pollutes our creeks. **NEW PERMEABLE PAVERS** allow water to drain through, and beneficial bacteria, which live between the stones and in the gravel bed below, remove toxins before they reach our creeks, beaches or the Bay. **Ask about the new styles!**

stands the test of time

Interlocked paving dates back to beyond the Roman times. You can still see remnants of the old Roman roads throughout Europe today. Whereas asphalt and concrete tend to crack and need replacing or resurfacing every few years, with just a little maintenance, your Legacy Paver installation will last a lifetime - or two!
